

The background is a dark, charcoal grey color with intricate, white, organic patterns resembling marble veins or ink splatters. These patterns are scattered across the entire frame, creating a textured and artistic look.

Bookmatch Bliss

Marble Collection

Bookmatch Bliss

Marble Collection

Welcome to the epitome of design excellence – introducing our latest collection, Bookmatch Bliss. Embrace the extraordinary with these large-format porcelain slabs, measuring up to an impressive 162 x 320 cm. Crafted to redefine spaces, Bookmatch Bliss offers a symphony of possibilities for feature walls, shower rooms, and statement splashbacks. Fully supported by our cutting and slab trimming services to simplify the installation process and ensure perfect vein matching. Bold in presence, these slabs are more than just surfaces; they are statements of style. Elevate the ordinary to the extraordinary, by using bookmatched slabs for luxury kitchen islands. Bookmatch Bliss stands as a testament to our commitment to pushing the boundaries of design innovation and offers the most diverse selection of bookmatch surfaces. See [here](#) for more information about the applications for bookmatch pairs. Note that 12 mm thickness bookmatch slabs are not rectified. This means that it will always be necessary to trim all four sides of both slabs to ensure that the graphic matches exactly with its mirrored pair. Trimming 12 mm slabs onsite is extremely difficult, we therefore strongly recommend that you include our fixed cost bookmatch trimming service when specifying 12 mm bookmatched slabs.

Environmental Certification

LEED® certification provides independent, third party verification that a building project meets the highest green building and performance measure. All certified projects receive a LEED® plaque, which is nationally recognised symbol demonstrating that a building is environmentally responsible, profitable and a healthy place to live and work. The environmental characteristics have been evaluated and found according to the requirements of content of recycled material for environmental assessment according to LEED® criteria. These products contribute to the increase in the LEED® rating of buildings where they are used.

The EU Ecolabel helps you identify products and services that have a reduced environmental impact throughout their life cycle, from the extraction of raw material through to production, use and disposal. Recognised throughout Europe, EU Ecolabel is a voluntary label promoting environmental excellence which can be trusted. Ecolabel certification applies to building products such as ceramic tiles for residential and public flooring and wall- covering. The commission in charge of the certification system measures the environmental impact caused by the entire productive cycle; in the case of ceramic tiles, the verification starts from raw material quarrying through to manufacturing, distribution, installation and their final disposal. Our factories conform and are certified by the European Community standard Ecolabel and the production process is in complete harmony with the Ecolabel certification.

GREENGUARD Certification ensures that a product meets stringent standards for minimal emissions of volatile organic compounds (VOCs) into indoor air. This program provides assurance that products designed for indoor use adhere to strict chemical emissions limits, fostering the creation of healthier interiors. Manufacturers with GREENGUARD Certification gain credibility for their sustainability claims, supported by empirical technical data from an unbiased third-party organisation. The GREENGUARD Certification Program instills confidence by ensuring that indoor products meet strict chemical emissions limits, contributing to the creation of healthier interior spaces. This empowers manufacturers to produce and customers to identify products with low chemical emissions, thereby supporting air quality and environmental well-being.

NSF® has facilitated the development of more than 75 standards and protocols for sanitary food equipment, and has certified thousands of products as safe to use in restaurant and commercial kitchen settings. NSF® food equipment standards include requirements for material safety, design, construction and product performance. The products conform to the requirements of NSF/ANSI Standard 51 – Food Equipment Materials. NSF/ANSI 51 establishes minimum public health and sanitation requirements for materials and finishes used in the manufacture of commercial foodservice equipment.

An Environmental Product Declaration (EPD) is a concise document that transparently communicates the environmental performance of a product throughout its life cycle. It provides comprehensive information about the product's environmental impact, including aspects such as raw material extraction, production processes, energy consumption, and emissions. EPDs are based on standardised methodologies and enable consumers, businesses, and policymakers to make informed decisions by considering the environmental aspects of a product in a systematic and comparable way.
