TAVOLO PEDESTAL BASE

Item	TOV-BP101 Ellipse Pedestal Base		
Description	Ellipse pedestal base with strip decoration		
Model	TOV-BP101		
Colour	TM ⁶ Collection (150 Colours)		Wood Strip Decor (6 Colours)
Shape	[Circular][Semi-circular][Oval]		
Notes	Coffee tables are typically 250 - 400 mm in height. Side tables are 600 mm. The standard height of a dining table is 760 mm. And console tables are often 900 mm high. The thickness of your table top will also affect the required leg height, therefore our pedestal legs are designed with a height variation of up to 5 cm to ensure when paired with a Tavolo Table top, they achieve the table height specified.

Notes	Coffee tables are typically 250 - 400 mm in height. Side tables are 600 mm. The standard height of a dining table is 760 mm. And console tables are often 900 mm high. The thickness of your table top will also affect the required leg height, therefore our pedestal legs are designed with a height variation of up to 5 cm to ensure when paired with a Tavolo Table top, they achieve the table height specified.
Dimensions (mm)	Width: 200-1200 Depth: 200-1200

TAVOLO PEDESTAL BASE CONT...

Item	TOV-BP301 Rectangular Pedestal Base
Description	Rectangular pedestal base with fluted decoration
Model	TOV-BP301
Fluted Decoration	The pedestal base on this page can be specified with or without fluted decoration. Fluted decoration is available in flute widths: [20 mm][25 mm]
Colour	TM ⁶ Collection (150 Colours)
Notes	Coffee tables are typically 250 - 400 mm in height. Side tables are 600 mm. The standard height of a dining table is 760 mm. And console tables are often 900 mm high. The thickness of your table top will also affect the required leg height, therefore our pedestal legs are designed with a height variation of up to 5 cm to ensure when paired with a Tavolo Table top, they achieve the table height specified.
Dimensions (mm)	Width: 200-1200 Depth: 50-1200
Table height	[250 mm][400 mm][600 mm][760 mm][900 mm]

	Non-fluted	Fluted

SPECIFICATION

Item	Cut-to-size		
Description	Custom cut-to-size service		
List price	Material cost plus cutting cost		
Colour	TM⁶ Collection (150 Colours)	TM¹² Collection (40 Colours)	TM²⁰ Collection (15 Colours)
Slab thickness	[6 mm]	[12 mm]	[20 mm]
Cutting rate	£28.00	£33.00	£55.00
Standard profiles	[Unfinished]	[45° Mitred Edge]*	[-45° Internal Mitred Edge]*

*45° Deemed to be nominal

Fluted Decor Fluted Decor can be incorporated into cut-to-size requests and is priced per square metre. Delicate grooves are cut into the material, creating a subtle contrast and variation to the surface design. Fluting grooves are 2 mm in thickness and can be specified at 20 mm, 10 mm or 5 mm intervals and a vertical or horizontal direction.

Fluted Decor rate £1150 per sqm

Strip Decor Individually cut strips can be supplied in widths between 26 - 34 mm. Strips can cut to clad flat or curved surfaces and applied to curved walls and pillars. Accurately angled mitred edges ensure a flush finish. Each strip is carefully labelled to simplify the installation process and ensure the veining and pattern matching continues across surfaces to be clad.

Strip Decor rate £1500 per sqm

Pricing explained Total cost is calculated from the material cost plus cutting cost. Cutting is priced per linear metre. Multiple pieces or cuts will be taken from a single slab where possible. The most cost-effective slab size will be selected for all orders. Please note that clients will be charged for the full cost of slab including any wastage. Pricing discounts will be formulated for bulk purchases. A set-up cost will be applied for short orders.

Note Discounts to cutting and profiling rates may be available for volume orders. Please contact us with your specific cut-to-size requirements.

Cut-to-size limitations There are no limitations regarding the dimensions of a cut-out, provided that it can be cut from a single slab. Rectangular, triangular or any quadrilateral or multi-sided polygon can be specified. Accurate 45° mitred edges can be provided for fabrication projects and 3D cladding using the latest generation, high-performance Flow Mach 200 Waterjet cutting machine.

SPECIFICATION

Item	Cut-to-shape		
Description	Custom shapes & profile service		
List price	Material cost plus cutting or edge profiling cost		
Colour	TM⁶ Collection (150 Colours)	TM¹² Collection (40 Colours)	TM²⁰ Collection (15 Colours)
Slab thickness	[6 mm]	[12 mm]	[20 mm]
Cutting only rate	£28.00	£33.00	£55.00
Standard profile	[Unfinished]		
			
Cutting with profiling rate	Profiling rate depends on the profile required and is priced per linear metre. See pricing below.		
Available profiles	[Straight Edge @ £55.00]	[Pencil Edge @ £55.00]*	[Bevelled Edge @ £55.00]
			
	[Bullnose Edge @ £60.00]	[Half Bullnose Edge @ £60.00]	[Shark Nose Edge @ £70.00]*
			
Pricing explained	Total cost is calculated from the material cost plus cutting and any edge profiling costs. Cutting and profiling are priced per linear metre. Multiple pieces or cuts will be taken from a single slab where possible. The most cost-effective slab size will be selected for all orders. Please note that clients will be charged for the full cost of slab including any wastage. Pricing discounts will be formulated for bulk purchases. A set-up cost will be applied for short orders.		
Note	Discounts to cutting and profiling rates may be available for volume orders. Please contact us with your specific cut-to-shape requirements.		
Cut-to-shape limitations	There are no limitations regarding the complexity or dimensions of a shape, provided that it can be cut from a single slab. Using the latest Breton Contourbreton NC 300 Evo CNC and Flow Mach 200 Waterjet cutting machines we are able to cut, machine, hone and polish all custom shape requests to exact specifications. Intricate circular, square or irregular shapes can be requested, while cut-outs can be specified with rounded or sharp corners.

Nosing profiles

			
Bullnose (12mm or 20mm)	Half bullnose (12mm or 20mm)	Polished straight edge (12mm or 20mm)	Mitred apron return nosing (6mm, 12mm or 20mm)
			
Double half bullnose nosing (6mm, 12mm or 20mm)	Mitred apron nosing (6mm, 12mm or 20mm)	L shape half bullnose (6mm, 12mm or 20mm)	L shape mitred apron (6mm, 12mm or 20mm)
			
Drip groove Type 1 (6mm, 12mm or 20mm)	Drip groove Type 2 (12mm or 20mm)	LED channel	Anti-slip grooves

Configure steps with one of the nosing options above All steps can be supplied with risers. Note “L shape half bullnose” and “L shape mitred apron” come with full risers as standard.

COMPOSITE STRUCTURE

Wall-mounted basins	Wall-mounted basins are manufactured with a water-resistant and durable core. This structure is then expertly clad with the selected surface and bonded with durable adhesives and Epoxy resins. The wall-hung unit is attached to the supporting wall with the supplied fixings brackets and the waste system can be accessed from below the item. We do not supply fixing screws, bolts, waste traps, tap connectors or any plumbing components.
Free-standing basins	<p>Free-standing basins are constructed with a marine-grade plywood core and feature a removable panel for accessing the waste system. Depending on the installation location this access panel can be specified on the rear or on the side of the basin. The access panel is secured with magnetic fastenings. Finally the base incorporates a concealed 'shadow gap' for manoeuvring the item once plumbed in.</p> <p>Some of the basins are offered with a configurable sink base. This base can be fixed, sloping or removable. With the fixed base sink the waste is visible. The sloping base option is fixed and water flows into a thin channel opening at the bottom edge, and then into a hidden waste. A small removable strip provides access for cleaning. On some models the direction of this slope is configurable. The removable base can be removed for cleaning and water flows through channels around the parameter of the base, into a fixed base sink and visible waste system.</p>
Basin waste	Water flows into a pre-installed 1 1/4" unslotted click clack basin waste. If this waste is visible it can be specified with a chrome, black or brass finish, otherwise we supply a premium chrome waste.
Wall-hung vanity tops & shelving	Wall-hung vanity tops and shelving are constructed with a wood core. In the case of bathroom vanity tops this will be water-resistant marine-grade plywood. Fixing plugs are provided for secure wall-hanging. This structure is then clad with the selected surface and bonded with durable adhesives and Epoxy resins. Edges are formed with accurate mitred joints.
Vanity tops with cut-outs	Vanity tops with cut-outs are constructed with a water-resistant and durable core. This structure is then clad with the selected surface and bonded with durable adhesives and Epoxy resins. The structured edges are formed with accurate mitred joints.
Kitchen countertops	<p>Kitchen countertops are made with porcelain surfaces from our TM⁶, TM¹² and TM²⁰ Collections. These innovative materials have been engineered particularly for the rigours of the kitchen environment. Cut-outs for basins, taps or hobs can be cut and draining grooves can be machined with high-precision CNC machine.</p> <p>Solid worktops with a thickness of 12 or 20 mm are available and can be specified with a choice of edge profiles. Standard countertops, islands and waterfall islands are constructed with an apron edge. All countertops require level and secure support every 600 mm, around the perimeter frame, under any joints and around cut-outs.</p>
Wall-hung breakfast bars & kitchen shelving	Wall-hung breakfast bars and kitchen shelving are constructed with a wood structural core. Fixing plugs are provided for secure wall-hanging. This structure is then clad with the selected surface and bonded with durable adhesives and Epoxy resins. Edges are formed with accurate mitred joints. Two options are available for the angle of the front face of the breakfast bar or shelving.
Seating and plinths	Seating and plinths incorporate a wooden frame which is clad with Italian porcelain and edges are formed with accurate mitred joints.

ADDITIONAL INFORMATION

Liability	Please note that we cannot be held responsible for the structural and plumbing aspects of installation. We therefore accept no liability for damage to the item during installation. We strongly recommend choosing a reputable and qualified professional for installation of this item. Two people may be required to safely handle and install this item.
Preparation	<ul style="list-style-type: none"> • Due to the considerable weight of items, when wall-mounting the wall or support structure to which it will be fixed must be checked and verified by a structural engineer. The installation should only commence once supporting walls meet the necessary standards. • When wall-mounting ensure that all electrical works, wall plumbing and pipe works have been carried out prior to installation. • Only once the fixing brackets have been securely mounted, should tiles be fixed to the wall.
Fixings & plumbing	<p>Due to the countless fixing options and wall types used within building works, we do not supply fixing screws, bolts, waste traps, tap connectors or any plumbing components with our items.</p> <ul style="list-style-type: none"> • If your item is to be wall-mounted, two or more wall fixing brackets will be supplied depending on the length of the item. • If fixing screws are required for this item, the specification for these fixings will be documented in the technical drawing supplied. • Floor standing basins are supplied with a removable panel for accessing the waste system. Depending on the installation requirements this panel can be on the rear or side of the basin. • All basins are supplied with a pre-installed 1 1/4" basin waste sealed with silicon. If this waste is visible it will feature an unslotted click clack waste system which can be specified with a chrome, black or brass finish. Details will be documented in the supplied technical drawing. • For fixed base and hidden waste basins, water flows through a thin channel into an unseen INOX steel sink bowl and waste system, accessible from underneath the item.
Basin position	When deciding on the location of basins and taps, ensure to take into account the thickness of the sink and tap fixings to ensure adequate clearance. Typically basins and vanity tops should be installed at a height of 85 cm. Consider a distance of 100-120 mm between the wall-mounted taps and the basin.
Taps	Please note that we do not supply taps. If the tap configuration specified is deck-mounted, the item will come with pre-drilled tap holes to the spacing specifications provided during the order process. We provide a standard diameter of 35 mm for all tap holes; however we can cut these to any size in order to accommodate your individual needs. There are many different sizes available on the market so please consult tap manufacturer's specification.

NOTES

Order process	Clients are encouraged to discuss their project with our consultants. We have a highly trained team of architects, engineers and account managers who will provide assistance through the entire process. This includes documenting your design, configuring options, confirming sizes and arranging delivery. Once the technical requirements for the project have been documented, our CAD technicians will prepare a technical drawing of the item for your signed approval. As soon as approval has been received and payment has been arranged, manufacturing will commence at our UK manufacturing facility.
Lead time	Lead time depends entirely on the type of service requested. Cut-to-size and cut-to-shape services have a lead time of 1-4 weeks. Countertops are 4-6 weeks, while bespoke basins, furniture and other fabricated items have a lead time of 6-10 weeks from payment confirmation and receipt of signed technical drawing.
Delivery & packaging	Delivery & packaging cost will depend on the size and weight of the item and delivery postcode. The final cost will be communicated during your order confirmation. Each item will be suitably packaged to ensure safe delivery. Rigid enclosures ensure that stress and flex is not transferred to the item during transport.
Templating	For accurate templating of countertops and work surfaces we provide an on-site laser templating service. Laser templating measures key points and contours within the kitchen layout and this information is then fed back to our studio. Here it is processed into the data required to communicate with our state-of-the-art cutting and profiling machines, enabling them to shape each worktop with the highest level of accuracy. Successful templating produces an extremely accurate worktop, eliminating costs associated with reworks and significantly reducing time spent on installation. Laser templating carries an additional cost.
Disclaimer	<p>Please note that while every effort will be made to supply goods to the size and colour specified, due to the handmade nature of these items, slight variations may occur. We adhere to a dimensional tolerance limit of $\pm 0.3\%$. It is also impossible to choose a specific graphical face or area of the tile and its location within the item. Where sizes are specified by the customer these are assumed to be the total dimensions to be made including any fixtures or fittings.</p> <p>© All rights reserved. V.23.193</p>
